

Electrical room and cabinets supply

DESCRIPTION

The selection plant is equipped with an electrical panel with an automation PLC, contactors, inverters, protections and anything else necessary.

Emergencies and control pushbuttons for manual movements are located along the entire line; flashing lights indicating system in operation and alarms for anomalies.

The electrical panel is equipped with a "touch screen" control panel for controlling and adjusting the line.

The automatic cycle is of the cascade type and starts the line from the last engine.

The protection doors for the rotating parts of the various machines (where present) are connected to safety switches that provide for putting the system in an emergency.
