

**107 / AMINO**

Energy Consumption

Since MRA 050 will be a storage facility, we do not think that this will absorb much energy, only that electrical for the transfer pumps at random due to operation constraints.

Regarding MRA 061 Extension, again only pump sets shall consume energy, apart from minimal amounts of steam for heating purposes. The actual breakdown may only be provided when detailed engineering has been completed after approval has been given.

Regarding energy efficiency, we intend to use variable speed control motors to reduce our energy consumption.

**108 / AMINO**

Noise and Vibration

The main source of vibration and noise will be the various pump sets installed to handle the various liquids on site. We do not envisage this source to be of any major concern to the other occupants of the Industrial Estate.

**109 / AMINO**

**Pollution Risk**

The MRA 061 Extension will be covered by the 017/Amino document already.

The MRA 050 site is a warehousing facility with adequate bunding and storage facilities for mitigating any future spillages.
