<b>INSPECTION REPORT</b>		<b>Doc. No.</b> ESBI / 01/2020
<b>Survey Carried Out: Oily water interceptor</b>		
<b>Plant Description: Fiberglass oily water interceptor tank and fittings.</b>		
<b>Model:</b>	<b>AQUABHDCE5006</b>	<b>Client: ESBI</b>
<b>Type:</b>	<b>Horizontal</b>	<b>Delimara Power Station</b>
<b>Serial No.:</b>		<b>L/O Marsaxlokk</b>
<b>Relevant Standard: EN 858</b>		
<b>Supplied by FM Environmental – Marsa Industrial Estate</b>		
<b>Comments:</b>  Contaminated water enters the collection point from various sources. It settles in Tank A, and flows internally to Tank B.  Tanks A & B both integral parts of a common shell.  Tank B contains level sensors and a hydrocarbon sensor.  Both Tanks A & B were isolated from the collection system, measured at 0800hrs on 12.10.2020.  The same tanks were re-measured 24hrs later, and no change in level was noted. The hydrocarbon sensor was tested and verified to function in the control room.		
<b>Recommendations:</b> The collection system has been found satisfactory and liquid tight. It is suitable for use.		
<b>Signed:</b>  Ing. N. Bellizzi B. Mech. Eng., M.Sc., Eur. Ing.	<b>Date:</b>  08.11.2020	

# Electrodes - ESI Oily Water Schematic

Possible oily  
contaminated  
water.

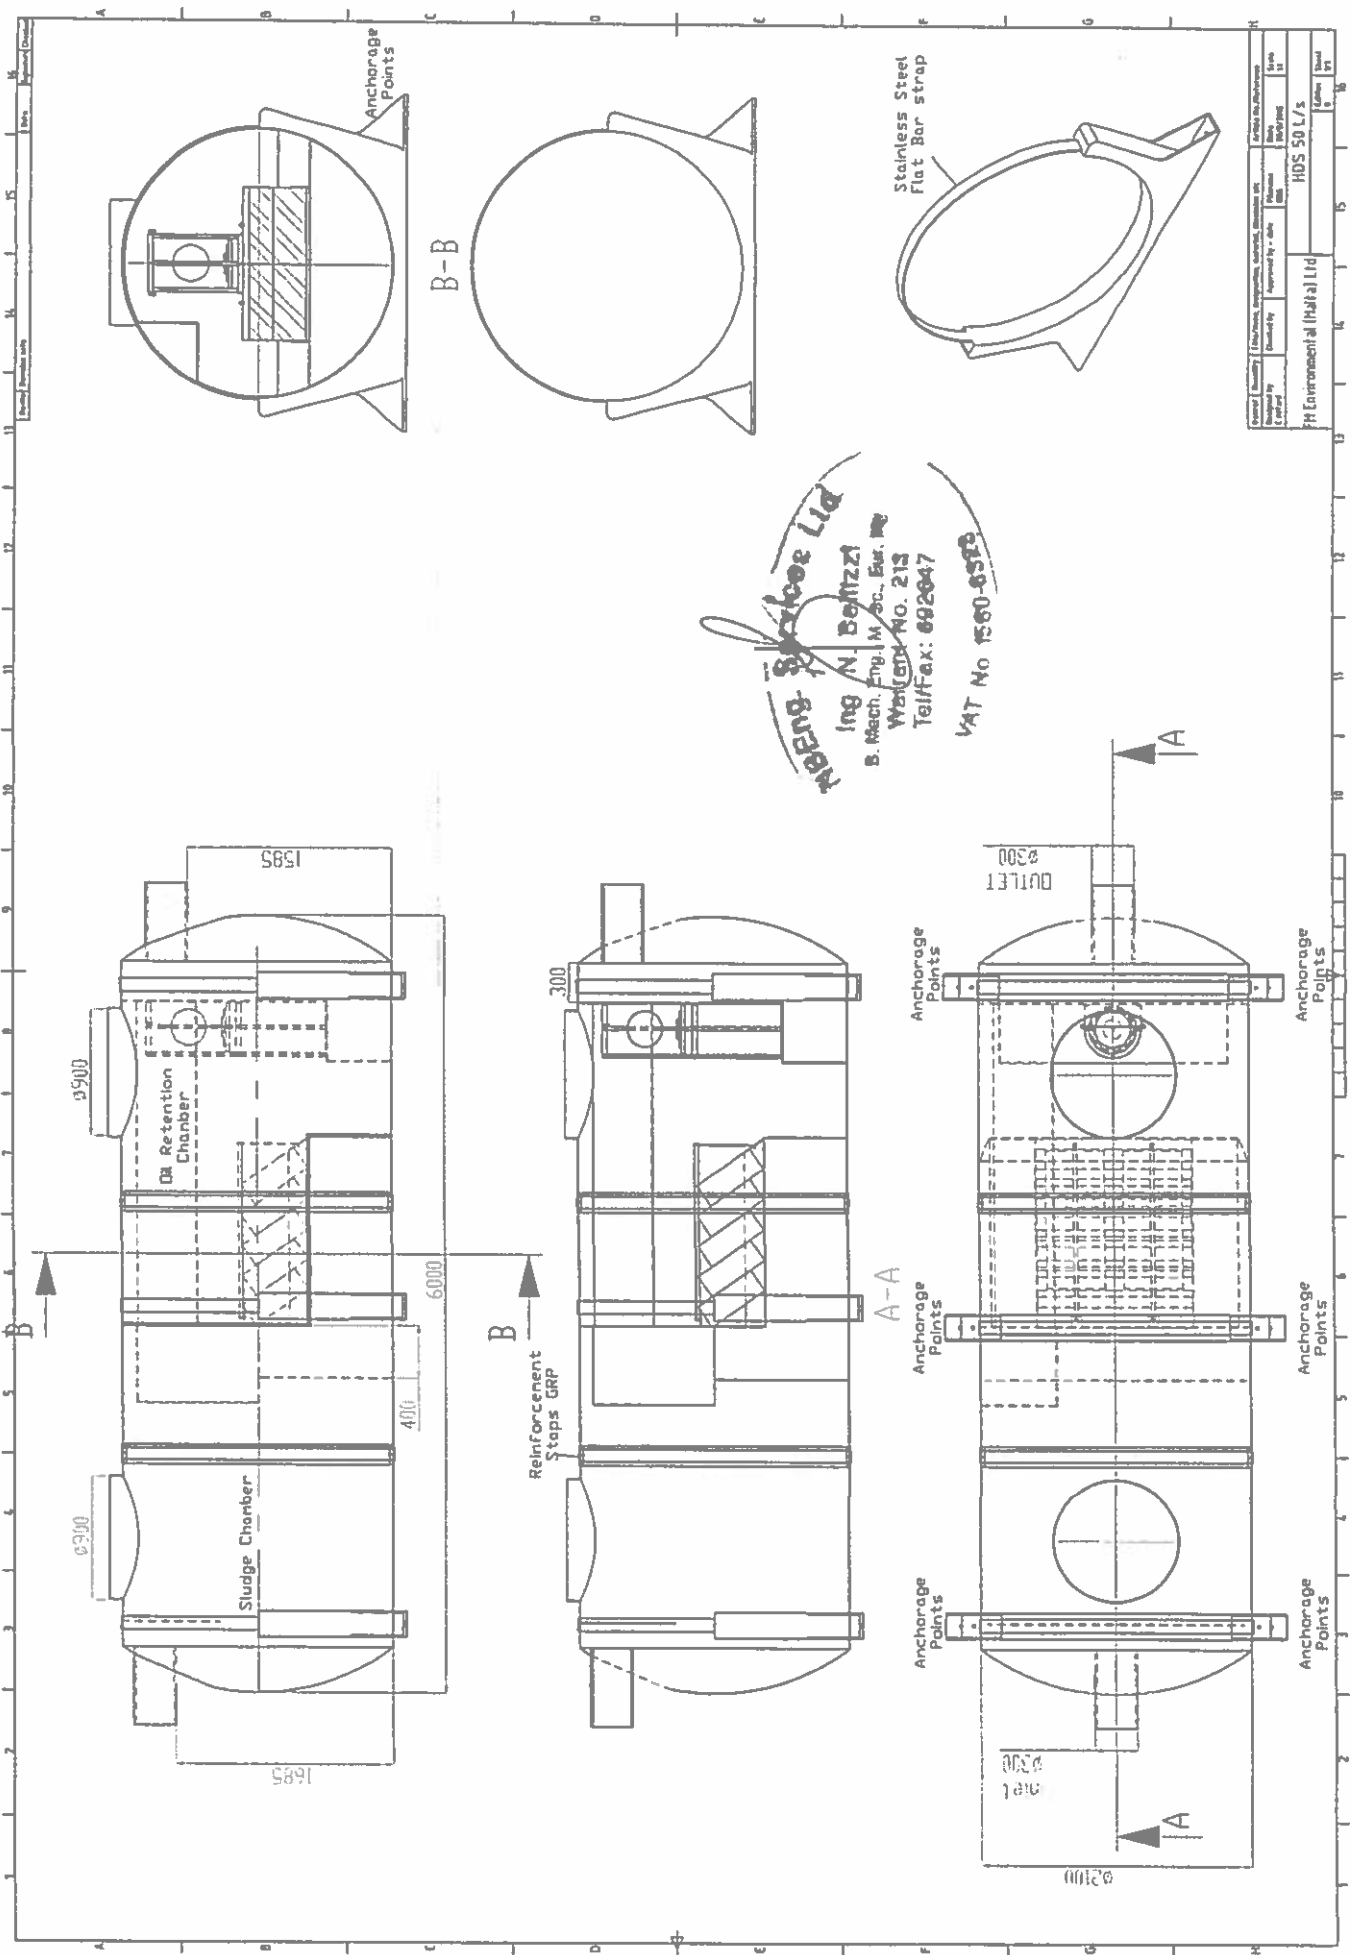

A+B one physical  
tank  
with interconnect  
chamber

Hydrocarbon - detector  
+ float switch.
