

IPCC: The Edible Oil Refining Co. Ltd.

B018

Waste Management

With reference to B017 we advise the following:

1. Liquid Waste - Disposal of this waste is through sewer system.
2. Bleaching Earth - After being cleaned by high pressure air, steam and hot water, this waste is removed from our site through a licensed waste collector
3. Raw material Packaging - This type of waste material is put into bins according to whether they are PE or paper and are disposed by a licensed waste collector.
4. Glycerin, soap stocks and emulsion - go through a recovery process of acidification, vacuum drying and are then used as fuel for our own boilers. The approx. quantity is 60 tons p.a.
5. Methanol - recovery is done through the extraction and vacuum drying system and is re-used in total in the process.
