Renewal and Variation of IP0004/12/A

Dr. Joe A Doublet PhD (Wales)

Applicant

Damian Whitehead

Architect

Perit Joe Grech B.E.& A. (Hons), A.& C.E.

May 2017

The proposed changes will consist of an increase in the storage area of the site in order to retain a larger quantify of scrap metals and also for increased parking facilities for company vehicles.

The proposed extension was originally covered with rubble material which was removed when the construction works in connection with PA 02453/10 were being carried out, reason being that the whole site was subject to an old enforcement order. The site is currently only used for parking of vehicles. No scrap metals are stored in this area. There is no indication of any ground contamination on the site.

During the compilation for IP0004/12/A a number of boreholes were drilled on site and samples were taken to analyse for any ground contamination. Negative results were obtained for these tests.

There is therefore no need for any additional sampling surveys in the extension site covered by application 03240/15.
