

Green Skip Services Ltd		EWC Codes: Procedures and Storage							
EWC CODE	Description	CATEGORY	PROCEDURE REFERENCE	PROCESSING LOCATION	FATE	STORAGE LOCATION	STORAGE METHOD	STORAGE CAPACITY	ESTIMATED ANNUAL THROUGHPUT
			Note: Other procedures other than those listed below may be used as described in the Waste Procedures document (in discussion with MEPA when necessary), and provided that an equivalent level of environmental protection is reached. It is necessary for GSS to maintain operational flexibility since the availability of authorised facilities (local and foreign) changes with time, and different wastes covered by a single EWC code can have varying properties depending on their source and the processes generating them. However, GSS employs qualified and trained staff to be able to decide on the appropriate process for each waste batch received.		Note: Facilities other than those named may be used instead, provided they have the required permits to accept that waste type.			(m <sup>3</sup> )	Note: Left blank when the waste code is currently not routinely accepted at the facility. Projects involving these waste codes would typically be one-offs, though in potentially large quantities. Site operations will be planned to ensure there is sufficient capacity to store and process such waste at the time it is received.
