 Sterling Chemical Malta LTD	PROCEDURE TO FOLLOW IN CASE OF FIRE (for fire fighters)	MIOS_4.4.7-A
Issue date: 08/01/2014		Review 00
		Page 2 of 2

In case of fire emergency follow the behavior learned during the specific training, coordinating with the Emergency Coordinator. Only who has appointed tasks has to participate actively at the intervention.

In particular:

- Wear suitable PPE supplied;
 - In case of limited dimension of fire extinguish it with the available means **WITHOUT JEOPARDIZE ONE'S OWN SAFETY**, making sure to have a safe way of escape; the procedure about the use of fire extinguishers and fire hoses and the table about the actions in case of fire are contained in the **MIOS_4.4.7-B Operating instruction about the use of fire extinguisher, fire hose and mobile foam units**;
 - In case it is not absolutely sure to be able to successfully cope, **do not lose time with useless attempt** and start the evacuation procedure;
 - Follow accurately and quickly the coordinator's dispositions.
1. Try, in safety and under the Coordinator's control, to confine the fire;
 2. Use the available fire devices wearing the suitable PPE and following the specific procedures learned during the training and written below:
 - **Do not open door if you suspect there is a fire beyond it**, particularly if it is smoldered: the opening of the door let flow air from the external producing a flame. In case it is necessary, **it should provide suitable firefighting devices and open slowly the door**, keeping protected behind the door.
 - **In dealing fire make sure to be covered in the whole body, preferably whit fire resistant garment. Use nuke water or get wet the garment to protect from radiant heat.**
 - **Before starting the operations make sure of electrical insulation, especially if water is used.**
 - **If possible, take away from the room all pressure container of gas and liquid, flammable and not, to avoid explosion. If not possible, cool down the container.**
