

WasteServ Malta Ltd

SAFETY PROCEDURE FOR WASTESERV EMPLOYEES DURING BLASTING OPERATION

Blasting tests on hard stone will be conducted at TA'ZWEJRA. This exercise will present a considerable risk to the workers involved.

The work from a technical and practical point of view will be conducted by a contractor external to our company under the supervision of the police and the competent authorities.

WasteServ Malta Ltd is responsible to safeguard its employees, government employees within the site, contractors and clients. As a result during the 20 minutes prior to the explosion operation, WasteServ employees will have to evacuate the site and close the gates of the site in order to avoid entry of unauthorized personnel. **(point X in the plan)**

It would be opportune if a WasteServ representative is located where the access road leading to the old Maghtab dump site and the access road to the present position of the crusher in order to ensure that no persons enter the site where blasting is to be conducted from these areas. **(point Y in the plan)**

Work will resume once the explosion operation is terminated and after the competent authority gives the go ahead for re-entry

The person in charge of the execution of this project should remember to co-ordinate with the police for the evacuation of the persons in the nearby fields. **(point/area Z in the plan)**

WasteServ Malta Ltd

The above procedure remains applicable even if the date of the operation is changed for any reason. In case the reasons are of a technical or logistical nature, kindly advise immediately.

A copy of this document will be given to the person in charge of the operation and to the site manager.
