1.	1 st October 2019	Dr Michael Briguglio	Email	2nd October 2019	<p>Attn Planning Authority Copied to Environment and Resources Authority</p> <p>Reference is made to IP0001/06 – Application for the renewal and variation of IPPC permit in relation to a Għallis non-hazardous waste landfill at Naxxar</p> <p>I am hereby appealing to the PA to commission a Social Impact Assessment for the development proposal. In this regard, kindly refer to my SIA proposals submitted to the Authority: https://mikes-beat.blogspot.com/2019/05/feedback-re-social-impact-assessment.html</p>	In view that comment appeared to be addressed to the Planning Authority (PA) and in connection with PA 964/18 and PA 1586/18, ERA has forwarded such request to the PA for follow up as considered necessary.	It should be noted that the scope of the application is for renewal of an approved IPPC application so as to continue operations on site, and to vary the landfill design and operation to introduce further improvements in waste management capacity.
2.	1 st October 2019	Mr Jon Camilleri	Email	2nd October 2019	<p>The title is misleading no waste is completely non-hazardous, and, I cannot review the proposal so I cannot really assert this is totally safe and conformant to the highest scientific standards.</p> <p>However, having said this I do appreciate the benefits of recycling waste using standardised and controlled process, reducing mistakes and errors with normative audit and management controls including inspections and in-house training, meanwhile wider political consultations, have duly given rise to opportunities for organising tertiary level courses that help the government of Malta achieve its goals as we are aware the wider implications of such goals on a national and territorial bases is not as simple as it appears in cartoons, we have a real life to balance nowadays, whilst other nations are struggling to maintain basic sanitary systems because they are still developing them according to reports at http://www.un.org, such inspiration might actually give rise to future eventuality of international business expansion as Italian-based non-profit organisations and other charity institutions in Malta have been doing for over a century presumably.</p>	<p>The renewal IPPC application is for an engineered landfill handling non-hazardous waste as defined in S.L. 549.29 The Waste Management (Landfill) Regulations article 8 (3) but excluding stable non-reactive waste as per permit IP 0001/05/B.</p> <p>The application is being assessed against the standards required by the S.L. 549.29 and other applicable legislation as defined in the IP 0001/05/B and this application.</p>	Further to the ERA response, it is also pertinent to note that this application also involves the introduction of further measures to improve waste management facilities on site.
