

Dust Mitigation Document

- Both crushers to be located at the lowest part of the quarry
- Conveyor belts to be covered within 2 months of granting of the permit
- Ceasing of activities once wind speed and direction reaches force 5 and North-east respectively.
- From the exit of the site to the main road there is a path which has a layer of gravel of around 175m which aids in limiting dust dispersal when vehicles drive on it. Once the applicant notices that gravelling is eroded, he will layer the path again with another layer of gravel.
