

## **Dust Mitigation document EP 0015/24'**

### **Dust Mitigation plan from La Cava Operations Ltd**

- Crushers and sievers have in built sprinkler systems in use during operation of equipment as a form of mitigation measure that will limit dust emissions from crushers/sievers
- Operator will effect Regular wetting by mobile water bowser which also has an in built sprinkler system as a form of mitigation measure that will limit dust emissions from stockpiles
- Operator will use a wheel washing facility on site next to the office as per previously submitted plan as a form of mitigation measure that will limit dust emissions
- The operator will not need to employ any mitigation measures to limit dust emissions from excavating of minerals since no excavation will take place in this application. Only backfilling. Regular wetting by mobile water bowser which also has an in built sprinkler system. Water bowser will be brought on site and wetting will take place every 2 days.
- Crusher and Seiver are to be kept at the lower part of the quarry and located furthest away from Wied il-Maghuq as per current permit.
- When wind force reaches Force 5 or above and wind direction is from the sea, all operations on site will be ceased until such wind conditions are no longer present.
